Application No.

Continuation of 11. does NOT place the application in condition for allowance because: Applicants' argument regarding the electrical conductivity of the porous thick film is not persuasive. Kimura/Hata/Utter/Ishikawa teach all the limitations and steps recited in claim 1, and therefore the resulting porous substrate will also have the same electrical conductivity. Applicants argue that Kimura, not the remaining references, is relied upon by the Office for its disclosure of a catalyst which is being equated/compared to Applicants' electrically conductive porous body. This is not persuasive because all the references were combined to result in the instantly claimed invention. Applicants' argument regarding inherency is not persuasive because since the combination of references teach all the limitations as instantly claimed, it is clear that the electrical conductivity would also be the same. Arguments regarding and expalining how/why the cited references do not have the claimed electrical conductivity is not persuasive since "neck" is not instantly claimed. Arguments regarding the newly added claim limitation is moot since the proposed amendment is not entered.
